Changing Nature of Value Chains

- “Second unbundling” of global value chains
  - Drop in prices for transportation and telecomms
  - Search for appropriate labor inputs
- Locate exactly the right “slice” of chain in exactly the right geographic location
- Not just goods, but services too
  - Even manufactured goods now 30-70% services
- Not just fragmentation of parts and components, but fundamentally new way of doing business
  - Trade in tasks plus geographic dispersion
Existing Trade Rules Not GVC Friendly

- Tariffs very problematic for GVCs—compounded for every border crossing
- Embedded tariffs can be high and amplification possible even in FTAs
  - Even in sectors apparently covered by ITA
- Tariff escalation hits GVCs as well, esp food
- Trade facilitation delays also compounded
  - Time, money, extra inventory costs
- Incompatible standards increasingly problem
- Such costs can be added to each and every part or component in chain as well
FTAs Don’t Usually Solve Problems

- FTAs too small or have wrong countries
- Tariff cuts inadequate—too small, too late, not cut at all
- Rules of origin (ROOs) a hassle
- Customs problems of all sorts: paperwork challenges, rules not helpful, too complex
- Services often not included at all or barely
- Non-tariff issues usually excluded, including standards, which are often biggest problems
- Businesses not consulted (or poorly consulted) during negotiation phase
Enter TPP...

• TPP provides significant benefits for GVCs
• Tariffs to zero on EIF for 90% of goods across 12 members
  – Includes all tariff lines for all products
  – Some TPP members have even better coverage
  – Tariff cuts can be substantial and fast
• Many problematic mechanisms avoided
• Rules of origin very GVC friendly
  – ROOs the same in all 12 countries
Add in Other Goods Rules

• TPP does not just cut tariffs though
• Trade facilitation includes several specific provisions of great interest for GVC firms
  – Advance rulings
  – Self-certification
  – Better harmonization of customs across members
• Greater transparency overall, esp regulatory
• Logistics and distribution also improved
Also Key: Services and Investment

• Negative list scheduling: every single sector and subsector open (with remarkably limited exceptions)
  – GVC firms can source services inputs, move investments as needed to match demand/supply
  – Unprecedented access
• Allows large and small firms to join GVCs
• Performance requirements also banned and greater clarity on investment rules, more transparency and consistency
Sprawling TPP Agreement

• Hard to see clearly exactly all the benefits of TPP for GVC firms because deal is so big
• Benefits are scattered
  – Government procurement opened
  – E-commerce could be very big in future?
  – Baby steps towards regulatory coherence
• But TPP does not address taxes, does not get far in standards, does not address licensing or fix all non-tariff barriers that cause firms problems
TPP Will Cause Supply Chain Restructuring

• Because the benefits for GVC firms are substantial, firms will start shifting to TPP
• May be direct moves of existing operations
• May be shifting future investments into TPP
• But will also mean trade and investment diversion across region from non-TPP members into TPP member countries
  – Firms will go to wherever benefits are greatest
  – Countries that are not in the TPP will have to think hard about how to avoid “own goals” in future
Asian Trade Centre

The Asian Trade Centre is the premier regional thought leader, advocate and educator for trade

• Strategic, creative thinking for policy and regulatory challenges
• Solutions for vexing trade problems
• Practical advice and suggestions for improving bottom line performance
• Sensible input to craft modern trade agendas
